

The seven puzzle pieces on the left (called **tans**) are part of an ancient Chinese puzzle; they can be arranged to form other shapes and pictures called **tangrams**. The pieces can't overlap, but they can be rotated and flipped.

Carefully cut out the shapes above and fit them into the square below.

Here is a simple tangram of a man.
Fit your tans into the silhouette to recreate the image.

Try these tangrams. You may find you need to flip some pieces.

Short Siamese cat

Tall Siamese cat

Ice skater

Swan

Camel

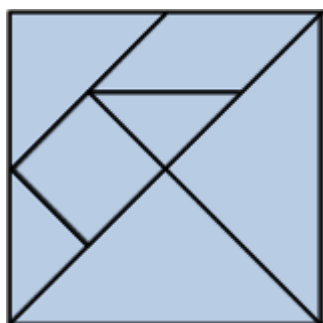

Rabbit

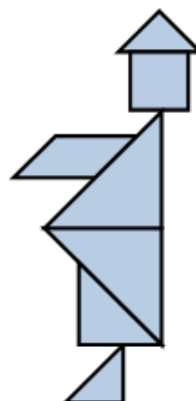

Can you use the tans to come up with your own tangrams? Remember that you must use all seven tans, and they must be touching with no overlaps.
